

1 Installing the package

The package capreq is installed from the internal repository and needs no other package.

2 Calculating a requirement

Call capital_k with the probability of default, the loss given default and the segment of the exposure.

The risk-weighted amount is obtained with rwa, which scales the requirement by 12.5.

Floors used by the package

Segment	LGD floor
Retail	0.15
Corporate	0.25
Bank	0.45
